TECHNICAL SKILLS

Languages: Golang, JavaScript, Typescript
Frameworks: Gin, Node.js
Developer Tools: Docker, Kubernetes, Git
Database: PostgreSQL, Redis, S3
Architecture: Microservices
Technologies: REST APIs, AWS

EXPERIENCE

Software Engineer 2

Apr 2025 – Present

NetApp

Bangalore

- Designed REST APIs for certificate lifecycle management (Self-signed, CA signed) and Used Traefik **reverse proxy** for persistent certificate storage.
- Leveraged **Kubernetes** Config to manage service(M2M) tokens to communicate with other microservices
- Upgraded Libraries in microservices to fix critical security vulnerabilities as reported by **BlackDuck** scans to stay compliant with best security practices
- Designed and implemented a **Golang** microservice for multi-cloud credential management and used MySQL paired with encryption to store credentials securely.
- Used **Docker** named volumes to share data between different containers.
- Integrated backend with cloud provider metadata services (AWS, Azure, GCP) to fetch instance-specific identity data.
- Facilitated logging using **Elasticsearch** and **Kibana**, configuring **Kibana Index** for real-time log streaming and searchable logs to help with debugging.
- Supported CRUD operations for client credentials with validation and encryption.

Software Development Engineer

Aug 2024 – Apr 2025

Great Learning

Bangalore

- Developed scalable visa processing system using **Node JS**, reducing API response times by 45% through optimized ORM queries and caching strategies.
- Integrated **Amazon SQS** to asynchronously notify users of document approval/rejection and alert experts for review, improving processing efficiency and reducing notification delays.
- Containerized services using **Docker** and orchestrated with **Kubernetes**.
- Used **Chain of Responsibility** pattern for multi-step document validation, improving validation accuracy and reducing processing time by 20%.
- Developed automated document compression pipeline using Lambda and S3 triggers, processing 15K+ files/month.
- Optimized **PostgreSQL** database schema for high-throughput document processing.

Software Development Engineer

Jul 2023 – Jul 2024

MountBlue Technologies (onsite at Great Learning)

Bangalore

- Built high-performance quiz engine using Java Spring Boot, handling 10,000+ concurrent users.
- Integrated malware scanning integration for file uploads using **AWS Lambda**-triggered antivirus scans, quarantining infected files before backend processing, and blocking 120+ malicious files monthly.
- Implemented **Singleton pattern** for AWS S3 client initialization, reducing connection overhead by 40% and improving API response times for file uploads by 25%.
- Designed **database sharding** strategy for user progress tracking, improving query performance by 55%

Software Engineer Intern

April 2023 – July 2023

MountBlue Technologies

Bangalore

- Developed inventory management microservices using Spring Boot and JPA/Hibernate
- Containerized legacy applications using Docker, reducing server costs by 40%
- Implemented JWT-based authentication system for enterprise APIs

EDUCATION

Lovely Professional University

B.Tech Computer Science (CGPA: 7.02)

Phagwara, Punjab

Aug 2018 – Aug 2022
